Orthopedists use medical, physical and rehabilitation methods as well as surgery. In fact, about half of an orthopedist's patients receive medical (non-surgical) management of injuries or diseases. Your primary care doctor may refer you to an orthopedist for such conditions and procedures as:

- joint replacement (i.e., hip, knee)
- hand microsurgery
- fractures
- dislocations
- torn ligaments
- sprains, strains
- tendon injuries
- bursitis
- ruptured disks
- low back pain
- bunions, hammer toes
- arthritis
- osteoporosis
- bone lesions

Surgeons rely on the expertise of CVMC Surgical Services for highly trained nurses and technologists, plus advanced technologies that allow them to deliver safe, effective care. CVMC's Same Day Surgery services include general, vascular and specialty surgery as well as endoscopic procedures.
